TLG Beta Code Quick Reference Guide

Revised: November 12, 2004

This document provides a quick reference to Beta Code and its Unicode equivalents. For a comprehensive overview of Beta Code, please see the *TLG Beta Code Manual*.

Unicode equivalents are correct as of Unicode 4.0. Italicized code points are Unicode code points that have been approved by the UTC but are not yet included in the standard.

Note. The UTC recommends the use of composing characters for keying polytonic Greek and not the precomposed characters found in the Greek and Coptic and Extended Greek ranges. Wherever possible we use composing characters on our website. However, most browsers do not yet render composing characters adequately. For these browsers we have no option but to use precomposed characters for the time being. The UTC has deemed this an acceptable stop-gap solution. Once a majority of applications can render the composing characters adequately, the precomposed characters will become deprecated.

Table of Contents:

Notes:
- ➢ Reserved characters for projects other than the TLG are shown in gray.
- ➢ Asterisks indicate uppercase letters in Beta Code.
- ➢ "Proposal?" is used for symbols whose use is not limited to Greek texts and therefore have not been submitted to UTC by the TLG; they may however be proposed in the future for consideration.
- ➢ "PUA": Private Use Area. This has been used both for characters that do not have reserved Unicode codepoints.
- ➢ "Markup" indicates symbols that do not require their own codepoint and should be handled through markup.
